

Unit 3: Network infrastructure and programming languages

1

esta de aqui

2

1. Work in pairs. Can you briefly define one of these terms?

IP address: it's a unique identifier for digital devices which allows them to communicate and connect with others through the internet

3.

a IP address

b cyberspace

c intranet

d url

e browser

f network

g router

h domain name

i html

j world wide web

1.

a user control and freedom

b placement

c predictability

d relevance

2.

a online

b successful

c freedom

d primary

e key

3.

a yes, they want control and freedom

b when things block others or it works poorly

c collecting intel from them or when ads are too relevant

1.

its a set of instructions that a programmer writes and gives to the computer so it does something he wants in a specific way, as many times as he wants.

2.

1 3

2 6

3 1

4 5

5 4

6 2

3.

compiled - c, c++, c#, java

interpreted - python, ruby, js, ts

4.

programming language

creation

elements

links

structure

web development

5.

html, css, js, ts, java, c#, sql

6.

c# is a straight-up copy of Java, but it offers a few things that Java does not. It is also used for different things primarily, such as developing windows applications

1.

a hell nah

b hell nah

c true

d true

e hell nah

2.

a languages are high or low level

b java, c++ and ruby are high level languages

c they can also be defined as machine readable language

3.

a efficiency*

b major

c described

d understand

e developer

4.

a a way to define the rules for writing code, data types, and control structures to manage the flow of the program

b a language that humans use to communicate between them, it usually follow simple structures and logic

c a language that a human can't understand because its mainly illogical number or sequence based, that only computers are able to understand

d yeah i know about all of them and know how to code in java and javascript

5.

high level - easy to understand, slower

low level - almost impossible to fully understand, faster, machine readable

1.

unlimited

24/7

megabytes

filters

29.95€

2.

1 3

2 4

3 1

4 2

5 5

3.

maxweb

29.55€

monthly or weekly, service of 1h per month or fixed amount of hours per week for better strategy

manage websites for small websites, large companies and independent professionals

1.

they gather his intel, send him to the warranty department and give him an appointment for a repair after

2.

working, battery, help, appointment, technical support officer, technician

3.

thank you, technical support, speak

call, 5, 25, queue

4.

a false
b true
c false

5.
3 apps
10 - 5
